YOUR LIFETIME ACCESS CODE

PCPRO-SAMPLE1

How to Activate

1. Go to peptide-calc-48x.pages.dev
2. Tap the ⚙ settings icon in the top right corner
3. Scroll to **Pro Access** → enter your code above → tap **Activate**
4. You'll see a green ✓ and a **PRO** badge. Features unlock immediately.

What Just Unlocked

Advanced Stack Builder
7 pre-built stacks for your specific goal. One-tap load — GLP-1 Recovery, Lean Bulk, Longevity, Cognitive, Body Recomp, Sleep Quality, Anti-Aging.

Injection Site Rotation Log
Track sites, flag overworked areas, and get rotation recommendations based on your history.

Full GLP-1 Titration Protocols
All 5 titration ladders side by side: Semaglutide, Tirzepatide, Retatrutide, Cagrilintide, Cagri+Sema combo.

Cycle Sync + Break Planner
12-month cycle map, projected restart dates, calendar export.

PDF + CSV Export
Export your full protocol for your physician or a spreadsheet. One tap.

QUICK START

First 5 Minutes With Pro

If you're on a GLP-1 (Sema / Tirz / Reta)

1. Open Stack Builder → tap "GLP-1 Recovery" → Load Stack
2. Adjust to your current week's dose
3. Check the titration protocol — find your week, confirm next dose

If you're running a healing stack (BPC-157 / TB-500)

1. Stack Builder → "GLP-1 Recovery" includes a BPC+TB healing add-on
2. Or load the standalone healing config — timing is pre-set

If you're focused on longevity

1. Stack Builder → "Longevity Stack" → loads NAD+ + Epitalon + GHK-Cu + MOTS-C
2. Adjust your doses. Timing and frequency are pre-configured.

To track injection sites

1. Log an injection as usual
2. A "Site" field appears — tap your injection location
3. After 3+ logs, check "Site Rotation" view for your recommendation

TIPS

→ Export to PDF before any doctor's appointment — formats cleanly

→ 12-month cycle planner is in Schedule tab, scroll to the bottom

→ If you clear browser data, just re-enter your code in Settings

→ Works on any device — just re-enter your code
